

be modified to make the data to be much clearly presented.

3. Table 2. Four PGRs are used to induce callus formation. Please specify the concentration for each of them.

4. In Materials and method section, the authors described "plant root length (cm), number of nodal segments and leaves of root were evaluated before transfer to ex vitro conditions". However corresponding data were presented in Results section.

Discussion

This section is too long. Please try to shorten it.
